

Clear is better

*Aesthetik-Line® Brackets
the clear solution*

**FORESTADENT**[®]
GERMAN PRECISION IN ORTHODONTICS

Visible results with invisible brackets

The aim of contemporary orthodontic treatment is fast treatment progress. This can be achieved with almost invisible brackets when you choose Aestetik-Line Brackets from Forestadent.

A clear solution

Aestetik-Line Brackets are made from clear plastic. You can see through these brackets which makes them seem invisible. The material is totally biocompatible and there is no risk of a irritation of the gingival.

Aestetik-Line[®] Brackets – the clear

See and feel the difference

The material composition of plastic brackets meets all the needs of orthodontic treatment. See and feel the difference. Gentle and aesthetic treatment with Aesthetic-Line Brackets – the clear solution.

solution

Aesthetics working for you

Perfect Aesthetics

Contemporary orthodontics requires precision orthodontic products to transfer exactly the right amount of force to move the teeth to the desired position. Generally orthodontics is divided into removable and fixed orthodontics.

Invisible forces

As implied by the name, fixed orthodontics require something to transfer forces onto the teeth in order to move them. These components are called brackets and are stuck to the teeth with a special type of glue which can be easily removed after completion of your orthodontic treatment. Today these brackets can be made from high tech plastic materials which make them almost invisible without compromising on clinical needs and efficiency.

You have got the choice

You, too, can afford
a perfect smile

A perfect smile looks great. You will never have to think twice about smiling and laughing and at the same time the correct positioning of the teeth will help you to benefit from healthy dentition in the future.

It's never too late

The sooner you start with orthodontic treatment the easier it is. Modern orthodontics can cater for all sorts of treatment needs at any age and what is even better – it can be almost invisible. Ask your clinician today.
